

Cortina Hoods

THE OLD-STYLE CHARM OF FINE CRAFTSMANSHIP

Smooth, rounded shapes, quality finishes and craftsmanship combined with high extraction capacity are the main features of Smeg's new Cortina hoods, which have been designed to be combined with the other appliances in the same old-style line, such as ovens, hobs and cookers.

Close attention to detail and the careful choice of a thermoformed material has given the hoods both a subdued and intense feel.

Sophisticated brass, antiqued silver and chrome finishes can be chosen to perfectly match your kitchen. The cream and charcoal finishes offer an elegant, flawless take on alpine-chic style.

The unique features of these new appliances go hand in hand with correspondingly top performances. The products feature technological characteristics able to satisfy different requirements and uses. These include an extraction capacity of up to 750 m³/h, four speeds to eliminate smoke and odours from rooms and halogen lamps for optimum visibility on the hob.

Inspired by the mastery of skilled craftsmen, who with their age-old expertise fashion wrought iron products, the Cortina hoods are available as items of furniture which add a touch of charm to rooms with different styles, whether classic or country.
